Software Requirements Specification (SRS)
Project GIGA, OBS Automobiles

Authors: Webcastle
Customer: OBS

1. Introduction

The purpose of this Software Requirements Specification document is to define the scope of the Automobile mobile application developed for OBS Automobile. This is to define and outline the solution going to be provided. The application will act as a multi-vendor platform for automobile services and products, connecting service provider and customers to enable them to purchase and sell services and products related to automobiles. The application will target both automobile service provider and customers who are looking for an easy, convenient and reliable platform to purchase and sell services and products related to automobiles.

1.1 Purpose

The Software Requirements Specification (SRS) document serves as scope of project to the client and outlines the technical requirements needed by the developer on creating the system for automating all processes related to automobile services and products as the tagline suggests “everything automobile”.

This document provides specific insight such as requirements, constraints, and detailed explanations of the proposed system to combat the client’s problem.

1.2 Overview

The result of the project will be an application that provides an easy and convenient platform for automobile service provider and customers to connect, transact and manage their services and products. The objectives of the project are to provide a user-friendly interface, fast and secure transactions, and a comprehensive database of automobile services and products.

2. Functional Requirements

This application provides different functionalities such as browsing and purchasing services and products, payment processing, Registration and Login, Offers and Loyalty points.

3. User Modules

The three major modules coming under this application are: **Customer, Service Provider and Admin**

The customer can register/login to the application or check the services and products as a guest with limited access. In order to purchase the listed services and products on the application, the customer needs to register and login. For registered customers after login, the application loads with Top services, Featured products and options to manage their account including profile, car details, service purchase and product orders. The customer will be able to search/view and purchase any service listed by the service providers and products listed by OBS admin. (for now service providers can add only services. Products will be added and order shipping will be managed by OBS admins) Customers can get the nearest service provider details in case of emergency.

Service providers can access the web app as a guest to get an overview. In order to list the services the service provider needs to register to the system. Service provider accounts need to be verified from the admin side after registration. After verification, service providers will be able to access the system and a dashboard will be displayed on which there will be general statistics of the entire application including the purchases, top selling services, total sales and options to manage their account. The service providers will be able to manage purchases from customers.

Admin can manage all functionalities such as service purchase, service & product categories, product orders, and service providers from the admin panel. Admin dashboard displays general statistics of the entire application including the total purchases, total orders, top selling services & products, total customer and service providers registrations.

Module	**Deliverable**	**Language**
Customer	Mobile App & Web App	English & Arabic
Service provider	Web App	English
Admin	Web App	English

3.1 Customer Module

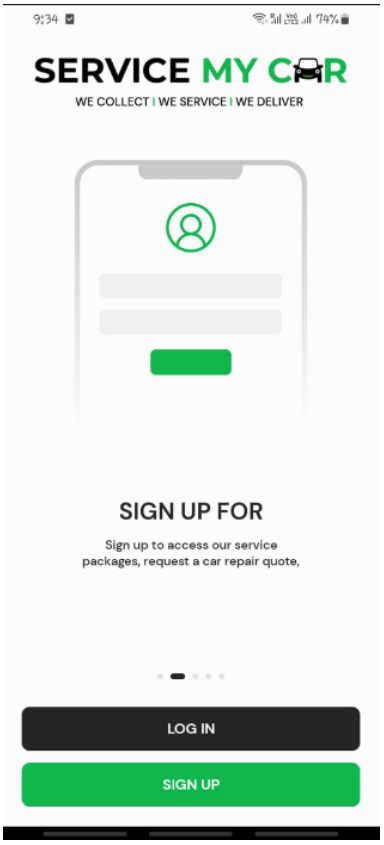
3.1.1 Customer Interface

When a customer installs and accesses the **application**, the app intro screen will be displayed with the **Login**, **Register** and **Continue as Guest** tab. Customers can either go through the screens or they can directly click on the Registration/Login/Continue as Guest tab from the first screen itself.

If a customer has already registered to the application, they can directly **Login** and access the application.

If the customer does not have any account and would like to register, they can click the **Register** tab and continue the registration process.

If the customer does not want to register, they can access the application as a guest, by clicking **Continue as Guest** tab (In guest mode, the customer will be having limited access to the application. They can search & view the services and products. In order to purchase a service or to order a product, customers need to register and login to the application. Emergency option will be available in guest mode)



3.1.2 Login to the Application

The login system will work with OTP. Customer can login to the system using phone number which they used at the time of registration

Phone number	- - -Enter your number- - -
Get OTP	

- Get OTP through Phone
- Enter OTP & Click Login

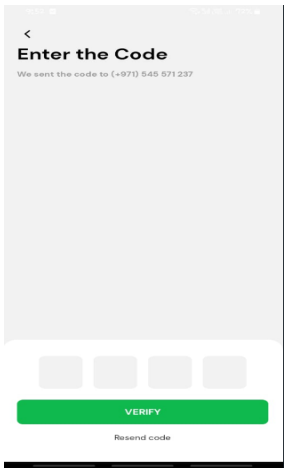
3.1.3 Registering to the Application

Customer can register to the system using the below fields;

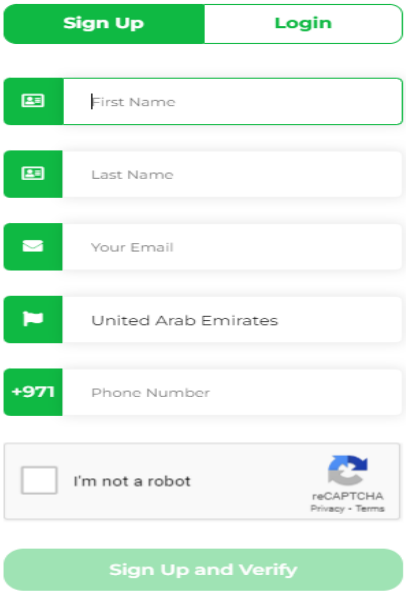
- Full Name (Required & alphabets only)
- Email address (Must be a valid email address) - verification email will be sent to the particular email id
- Phone Number (space and special characters are not allowed)
- Select Emirate from dropdown

Name	- - -Enter your full name - - -
Email Address	- - -Enter a valid email id - - -
Phone	- - -Enter phone number- - -
Emirate	- - -Select emirate- - --
Verify	

- Click Verify (leads to OTP page)



- Get OTP in phone
- Enter OTP & Click Verify
- Upon verification, it leads to Car Details Page (Optional)
- Customer either can add the car details here or they can click **Skip & Register**
- Upon successful registration popup will be displayed “Successfully Registered”



3.1.3 Customer View after login / registration

After completing registration, customers will be redirected to the Application home page. The entire home page will load with the Top services, Featured products, and header & footer menu. Header includes **Search option, Current location, Emergency.** Footer menu includes **Home, My Account, Categories, Become a Pro** / **My PRO Offers.**

(**Become a PRO** tab will be displayed for customers who do not have a PRO account. Once the customer upgrades their account, Become a PRO tab will be changed to **My PRO Offers**)

Services and products will be shown based on the current location. (Application automatically takes the customer location while accessing the app). From the home page customers can access each section as per their choice.
